

Canning & Sleeving

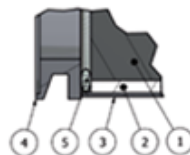

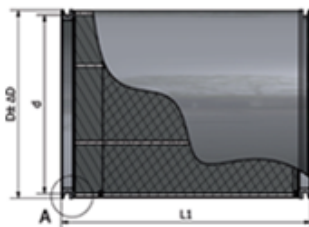

LiqTech also provides different canning solutions, whether you prefer a canning with flanges or just want us to sleeve the filter with an internal ring.

The materials are always AISI 304 stainless steel for having the best durability, and the support mat plus wiremesh are also first quality. A canning procedure requires well skilled mechanics that are familiar with the procedures, and we are offering a first class product. The cones/flanges are welded directly onto the sleeve. Drawings or measurements can be sent upon request.

Please find below the standard sizes and tolerances.

STANDARD CANNING DIMENSIONS

| Parts List | | |
