

Special Filters

Special Filters

Most of LiqTech DPFs are round filters, but we are also able to customize filters to different shapes. Besides the round filters we can offer square, oval, donut or racetrack shaped filters in 90 to 180 CPSI. Whatever your project requires, we are able to make prototypes for testing. In 4-6 weeks after approving prototypes, we will in most instances be able to deliver a production standard product.

Our flexibility is one of our main competences, which is shown in some of the pictures below.
